

## Running ADWCleaner

To run the program click on the scan button and this will show the next screens which shows you it is scanning the system. It is shown with a blue bar just under the ADWCleaner logo.

When this is finished check the tabs like services, folders to see if there are program that will be removed. As shown in the next screen.

## Removing Problems

To remove these files and folders all you do is click on the Cleaning button and you will get a message shown in the next screen.

When you see this click on the ok button and then you will see the next screen.

This shows you that the program is deleting unwanted programs from your system. When this program has finished it will come up with a warning shown in the next screen.

So just click on the ok and then you will get the next screen.

So click the ok and the system will reboot when the system has booted up it will give you a txt file with the details of all the unwanted programs that it has deleted from your system.
